Activity – Student Technology Programs & Mentorship Readiness

Name:Anubhav Tiwari
Program: B.Tech Computer Science and Engineering
SRN: R25EJ011

1. Program Analysis

I selected **GitHub Campus Experts** and **LFX Mentorship** because they align with my interests in programming, Git/GitHub, open-source development, technical communication and technology communities.

Criteria	GitHub Campus Experts	LFX Mentorship
Focus	Building and leading technical communities	Contributing to open-source software projects through mentorship
Eligibility	18+, enrolled in higher education, and must meet GitHub's current program requirements	18+ and must satisfy the eligibility and requirements of the selected mentorship project
Technical requirements	GitHub experience, technical communication and community-building skills	Programming skills and projectspecific technical requirements
Application cycle	Annual application cycle; exact dates should be verified on the official GitHub page for the relevant cycle	Mentorships are offered in different terms; exact application dates vary by project and term
Benefits	Training, mentorship, technical communication and communitybuilding experience	Open-source experience, mentorship, collaborative development and career development
Relevant career track	Open source, GitHub, technical leadership and community building	Open source, software development and collaborative engineering

2. Readiness & Gap Analysis

Current strengths: I am a first-year B.Tech CSE student with a 9.0/10 CGPA. My current portfolio includes GitHub repositories for a C-based Line Editor, LeetCode practice and HackerRank problemsolving, as well as a personal portfolio website. I have experience with C, Java, SQL, DBMS and Git/GitHub. I have also completed an ESP32-based Smart Water Tank Monitoring System as an academic project.

Current gaps: My main gap is limited contribution to established external open-source projects. I need more experience with GitHub issues, pull requests, code reviews, branching and collaborative development. I also need to strengthen technical writing and formal technical-community/leadership experience. My LinkedIn and professional profiles can be improved by

highlighting projects, coding achievements and contributions. I must also verify age and other eligibility requirements before applying to either program.

3. Four-Week Preparation Plan

GitHub Campus Experts
Week 1: Improve my GitHub profile, project READMEs and Git branching/pull-request skills.
Week 2: Participate in a coding or student technical activity and practise explaining technical topics clearly.
Week 3: Make a beginner-friendly open-source contribution and document the work.
Week 4: Update my portfolio and LinkedIn profile and prepare application responses describing my technical and community interests.

LFX Mentorship
Week 1: Explore LFX projects that match my current programming interests and skills.
Week 2: Study a suitable project's repository, documentation, issues and contribution guidelines.
Week 3: Complete a beginner-friendly contribution or project prerequisite task where appropriate.
Week 4: Prepare a project-focused résumé/application profile and document my contributions and technical learning.

4. Draft Application Material – Technical Community Motivation Essay

I am a first-year B.Tech Computer Science and Engineering student interested in programming, problem-solving, software development and practical technology projects. Through my academic work, I have been developing skills in C, Java, SQL, DBMS and Git/GitHub while building projects such as a Line Editor and an ESP32-based Smart Water Tank Monitoring System.

I want to participate in a technology community program because I want to move beyond individual coursework and learn how developers collaborate on real projects. GitHub Campus Experts interests me because it combines technical learning with community building, communication and leadership. LFX Mentorship also interests me because it provides an opportunity to understand how established open-source projects are developed and maintained.

I am currently strengthening my GitHub profile and coding practice through project repositories, LeetCode and HackerRank work. My next goal is to gain practical experience contributing to external open-source projects through documentation, testing and beginner-friendly issues. I also want to improve my technical writing and ability to explain programming concepts clearly.

I can contribute curiosity, consistency, willingness to learn and experience from academic projects. In the longer term, I want to become a stronger software developer and participate actively in technical communities where I can learn from experienced developers while helping other students learn as well.
